IRIS – Computerized Maintenance Management System (CMMS)

Tracks system and equipment maintenance ensuring long term productivity

IRIS (Intelligrated Reliability Intelligence Solution) maintains and implements a tailored computerized maintenance management system (CMMS) encompassing the entire maintenance spectrum, helping maintenance and facility managers maximize the asset lifecycle cradle to grave. Utilizing data within IRIS allows for streamlined best practices to predict and prevent breakdowns, improve labor productivity, reduce costly downtime, maximize inventory management and lower the total cost of maintenance.

As a full-featured, customizable solution, Honeywell Intelligrated utilizes the CMMS to meet specific customer needs. Customers easily connect to IRIS through a web-based application, eliminating the need for stand-alone software installations on multiple machines. Pre-configured OEM preventive maintenance procedures, corrective maintenance procedures and schedules come standard with each implementation based upon manufacturer-specific maintenance recommendations and industry specific best practices.

For BOSS 3 customers, operational data is automatically collected to facilitate predictive conveyor maintenance, allowing for:

- Elimination of human error: data is no longer manually collected
- Broader system coverage: automatic data collection allows monitoring for multiple assets
- Right-time maintenance prevents unnecessary over-maintenance as well as under-maintenance
- Intelligence through built-in visualizations and reports: with this integration, there is a broader spectrum of data available for analysis and reporting, allowing more opportunities to spot trends earlier for intervention and improved planning

FEATURES & BENEFITS

- Automatically collects operational data to facilitate predictive conveyor maintenance (BOSS 3 only)
- Maintenance planning and labor scheduling
- Standard database libraries for multi-site data integrity and streamlined implementation
- Assists customers with parts ordering due to a unique parts inventory tool
- Feature-rich reporting tool for expedient access to data
- Improves labor utilization
- Produces easy-to-read graphs in Reporter/Dashboard programs
- KPIs within the application give real-time data to aid in daily workload scheduling
- PM procedure libraries specific to material handling systems based upon OEM engineering recommendations
- Maintains parts inventory record; links directly to Honeywell Intelligrated for easy ordering

IRIS – Computerized Maintenance Management System

Work orders generated within IRIS are scheduled and delegated to craft-specific technicians based upon scope of work and automated routing within the application. Management personnel also have the ability to utilize the built-in labor scheduling tools to effectively and efficiently streamline and balance workloads. Automated notifications via application alerts, email or SMS text message can easily be set up within the application to alert technicians when a job has been assigned to them. Further, technicians have the ability to synchronize job schedules to Microsoft Outlook accounts for quick reference.

Featuring tools to track predictive and corrective tasks, projects are monitored from initiation to successful completion. The CMMS Reporter is a feature-rich application that provides quick access to data maintained in the system in multiple table and chart formats. The Reporter, containing over 600 reports that come standard with each implementation, completely integrates into the application. The preventive maintenance tools allow for consistent and repeatable processes while maintaining an integrated scheduling tool. In addition, preventive maintenance is easily scheduled, ultimately decreasing downtime and operational costs while improving labor utilization and optimizing customer service. Finally, integrated inventory and spare parts management features ensure optimum parts on hand accuracy, accountability and the ability to order parts directly from the application through a direct link to Honeywell Intelligrated.

Any repair and service reports performed at customer facilities are stored for future maintenance reference and are easily accessbile by clients.

IRIS Details

- A detailed survey is compiled listing all equipment (equipment number, conveyor number, etc.); included in reporting
- Program tailored to fit customer-specific business needs
- Training is provided for all customers
- Ongoing IRIS technical support
