POST AND PARCEL SOLUTIONS

Honeywell

HONEYWELL POSTAL SOLUTIONS

AN EVOLUTION THAT BRINGS CHALLENGES AND OPPORTUNITY

Today's post and parcel landscape is marked by transition and competition, with technology shifts making an impact. Digital marketing and communication have carriers handling an ever-changing mix of mail types, while new business models are creating more delivery points. The rise of e-commerce continues to shape handling operations, changing the postal product mix, increasing parcel volumes, and requiring aggressive delivery timelines.

Success in these evolving conditions requires innovative strategies and technologies for post and parcel processing, with carriers, retailers and new entities all playing a role. Operations need automated systems designed to reduce touches, handle everything from flats to large packages, expand as business dictates, and seamlessly integrate with other automation. This combination of efficiency, flexibility and scalability is critical to meeting today's postal requirements while staying ahead of future developments.

HIGH-PERFORMANCE SORTATION FOR EVERY PARCEL AND PURPOSE

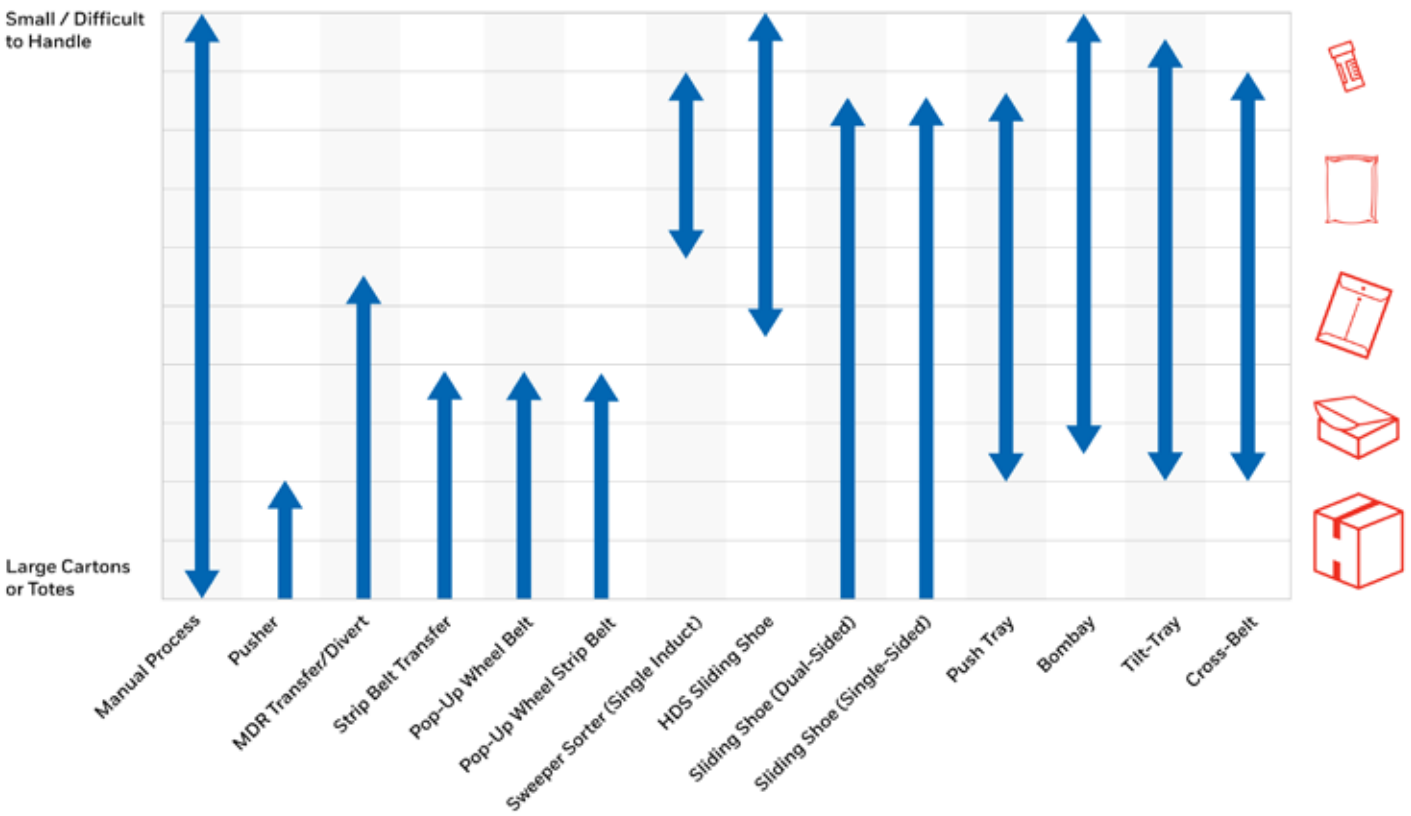

Honeywell provides high-speed sortation systems for some of the world's largest, most efficient post and parcel hubs, retail distribution centers and manufacturing facilities. Whether handling rigid cases, bubble mailers or letters in zone-skipping, two-pass sequencing or other applications, Honeywell brings together a broad range of sortation technologies and workflow expertise to direct items quickly and efficiently.

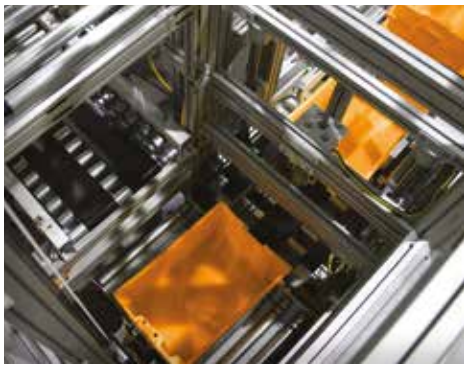

Sortation Technologies by Item Type

FULLY INTEGRATED AUTOMATION SYSTEMS CREATE A CONNECTED SOLUTION

Honeywell leverages decades of integration experience to enable comprehensive, best-fit solutions tailored to the unique requirements of postal processing operations. Honeywell offers a full suite of automation technologies, including:

- **Vertical solutions** – Save valuable floor space and keep product flowing smoothly and efficiently.
- **Buffering systems** – Stage items for consolidation, sequencing or buffering in preparation for shipping and delivery with quick item access and maximum storage density.
- **Conveyor capabilities** – Keep a variety of packaging types flowing through merges, diverts or accumulation zones.
